

Declaration of Loss and waste of food

At Cencosud, we are aware of our responsibility to and impact on society. Because of this, we seek to encourage responsible supply and consumption in line with sustainable development.

We contribute to the improvement to the quality of life and health of our communities by building relationships based on participation, trust and respect.

It is in this context that we see the need and importance of moving forward with global programs that allow us to face challenges such as Food Waste and Loss, monitoring our impact and establishing commitments along four action axes:

- 1 Internal Efficiency: purchasing, logistics, transportation and manipulation
- 2 Donation;
- 3 Final Disposal; and
- 4 Responsible Consumption.

Efficiency in Business

- Constant encouragement of improvements to product demand estimation in order to **purchase** only the necessary amount and reduce waste.
- Improvement of **logistical** processes in order to prolong the availability of the products to be purchased by clients, as well as finding local and regional producers to encourage efficient **transportation**.
- Keep working responsibly with our teams on the good care and **manipulation** of food throughout the supply chain.

Arranging donation of products apt for human consumption

- Keep creating sustainable processes and alliances for the **donation** of products that are fit for human consumption, in a socially responsible manner, arranging delivery through organizations that allow us to reach the most vulnerable groups in our community.

✓ **Arranging final disposal of products in a conscientious and responsible manner**

- Keep developing processes and alliances to handle **final disposal** of products in a way that environmentally responsible, reducing waste and preventing the use of landfills as their final destination.

✓ **Promoting responsible consumption.**

- Continue raising awareness among our clients in order to create **responsible consumption** habits, both at the time of purchasing and during the later manipulation, conservation and use of food in their homes, thus reducing organic waste.

At Cencosud, we are committed to the challenge of being more efficient every day to try to prevent and reduce food waste and loss, through a socially and environmentally responsible process, in harmony with our environment, thus contributing to the growth and strengthening of our society.
